RETRIEVES EXAMS FROM REMOTE

RefertieImmaginiOnLine is the web retrieval service of reports dedicated to public and private facilities.

The system allows the citizen to download in a browser their own reports produced directly in the facility.

The reports are digitally signed and are kept in accordance with current norms.

RefertieImmaginiOnLine is composed of:

- HSA application for digital signature management. Such application can be provided in two options: using signature tokens or remote signing. Both options provide operation even in roll mode. With the remote signature option, the doctor can sign the reports without being present in the facility.
- Download citizen's reports portal.
- External secure storage system.

The massive signature application allows the user to sign all reports in the "container" of the reports that have not yet been signed and to deposit them in the "container" of signed reports ready for publication on the web portal.

The report download portal allows users to retrieve their report after authenticating with the keys to be notified when the payment is made. The permanence of the reports in the portal will be limited to a period of time to be established with the center (usually 45 days).

The external preservation system of reports allows you to store signed reports at a facility that will fully manage their legal retention. Communication methods from and to the structure information system are implemented after analysis with the provider of such information system.
