

RETRIEVES YOUR MEDICAL EXAMS EASILY AND IMMEDIATELY

DOXME is the digital solution that revolutionizes how patients collect medical reports in both public and private healthcare facilities. No more waiting at the counter: with **DOXME**, citizens can access their exam results directly online, anytime and from any device. Through a fast, secure, and regulation-compliant system, each user can download digitally signed reports with maximum reliability.

The platform is designed to provide an intuitive and immediate experience, reducing the administrative workload for facilities and improving service quality.

Additionally, **DOXME** allows downloading a ZIP package containing the exam images (such as radiological images), ensuring full access to clinical documentation. For facilities that require it, EyeLiteWEB is available: an integrated web viewer that allows diagnostic images to be displayed online without installing dedicated software.

WHY CHOOSE DOXME

Immediate access and complete autonomy.

Users can view and download their reports using the credentials provided at the time of examination.

No software installation required: a simple web browser is enough.

Complete download of clinical documentation.

In addition to the report, users can also receive a ZIP file containing the diagnostic image ideal for sharing with specialists or trusted physicians.

Online viewing with EyeLiteWEB (optional).

For an even more immediate experience, DOXME can integrate EyeLiteWEB, an advanced web viewer that allows interactive image visualization directly from the portal.

Certified security and compliance.

All documents are handled according to current regulations on data retention and protection. Healthcare facilities benefit from traceable, reliable, compliant processes.

Controlled availability of reports.

Reports remain accessible for a defined period (typically 30 days), ensuring the best balance between user convenience and information security. Simple integration with existing systems.

DOXME integrates with PACS, RIS, and major healthcare information systems. Implementation is preceded by an analysis to ensure full compatibility with existing workflows.

HOW THE SYSTEM WORKS

The entire process from patient admission to report consultation is fully digitalized.

Healthcare staff generate and digitally sign the report, which is then archived in the preservation system and made available on the patient portal.

Using the provided access credentials, the patient can:

- download the digitally signed report
- download the ZIP package containing diagnostic images
- view images online via EyeLiteWEB (if enabled)

A simple, fast, and modern workflow that improves every stage of the service and enhances the patient experience.
